## **HEALTH & SAFETY STATEMENT**

This statement must be read in conjunction with the Air Control & Development Ltd Health & Safety Policy provided.

Air Control & Development Ltd employs Citation Plc as its health and safety consultant and has done so for more than four years.

Continual health and safety training is paramount to the Board of Directors and is provided to all members of staff.

A dedicated Contracts Engineer (either HNC/HND qualified or qualified by experience and verified by Air Control & Development Ltd) will manage each project undertaken by the company. The nominated Contracts Engineer will produce Method Statements and Risk Assessments in order to ensure the safe running of any given project. The Directors do not believe in producing the documentation purely as a paper exercise but insist that the health and safety documents are clearly outlined to direct and sub-contract labour, and any other person who may be directly or indirectly affected by any work undertaken.

During the design process, an HNC/HND qualified engineer will, as far as is possible, design out any risk that may be associated with the project. Through clear communication, the information will be provided to the Contracts Engineer.

Where a risk cannot be eliminated, ie working at height, appropriate provision will be made in order to reduce the risk to a minimum; this would include provision of access equipment, all PPE and any necessary training.

All labour, whether directly employed or sub-contract, will have had the relevant training and certification in order to carry out the work in a safe manner.

The Directors of Air Control & Development Ltd are proud of their health and safety record and since commencement of trade have never had a reportable incident, nor any enforcement placed upon them.
